**TABLE 1**

**Summary of the Data Collection Process**

The following table summarizes the data collection process, showing the number of participants who completed each stage of the study.

**Participant Flow:**

- Initial sample size: 100
- Excluded due to incomplete data: 10
- Final sample size: 90

**Data Collection Stages:**

- Stage 1: Initial assessment (n = 100)
- Stage 2: Intervention phase (n = 80)
- Stage 3: Follow-up assessment (n = 70)

**Data Analysis:**

The data were analyzed using SPSS version 25.0. Descriptive statistics were calculated for all variables. Inferential statistics, including t-tests and ANOVAs, were used to compare groups and assess the significance of differences over time.

**Ethical Approval:**

The study was approved by the Institutional Review Board (IRB) at [University Name]. All participants provided informed consent before participating in the study.

**Limitations:**

The study has several limitations. First, the sample size was relatively small, which may limit the generalizability of the findings. Second, the study was conducted over a short period, which may not capture long-term effects. Third, the self-reported nature of some data may introduce bias.

**Conclusion:**

The study found that the intervention had a significant positive effect on [outcome variable]. These findings suggest that the intervention may be effective in improving [outcome variable] in this population. Further research is needed to confirm these results and explore the underlying mechanisms.

**Acknowledgments:**

We thank the participants who made this study possible. We also thank the research assistants and staff who supported the data collection process.

**Funding:**

This study was funded by [Funding Source].
